GERMS STREAD DAILY
We come in contact with nearly 60,000 germs throughout the day, many of which live on items we normally wouldn't think to clean. UV-C light damages the DNA in bacteria and viruses, eliminating them on the spot without leaving harmful chemical and smelly residue.
LAB CERTIFIED
Independ lab testing proves that PATHO-X eliminates 99.9% of harmful pathogens that live on items you use every day!

HIGH POWER LEDS
Pathogens, germs and viruses live in the cracks and crevices of many of our most touched items, leading to nasty colds and flu. UV-C LEDs reach the spots chemical wipes can't.

WIPES DON'T WORK
Wiping down your passport, ID, and credit cards can easily miss odd angles on the surface and leaves an unattractive smell. PATHO-X is carefully calibrated to hit every exposed square inch of your documents, making it clean and fresh every time!
